

AIM: To design an ER diagram for an Indian E-Commerce platform containing entities: Customer, Product, Order, OrderItem, Seller, Category, Payment, Delivery and Address.

THEORY: An entity relationship (ER) model is a conceptual representation of data used in database design. It describes entities, their attributes and relationship among them.

KEY CONCEPTS:

- (i) ENTITY: Real world object represented by  (rectangle).
- (ii) ATTRIBUTE: Property of an entity represented by  (ellipse).
- (iii) PRIMARY KEY: Uniquely identifies an entity represented by  (underlined text).
- (iv) WEAK ENTITY: Entity that depends on another represented by  (double rectangle).
- (v) RELATIONSHIP: Association between entities represented by  (diamond).
- (vi) SPECIALIZATION: Dividing an entity into sub-entities represented by  (triangle labelled ISA).

NOTATION USED:

-  → Strong Entity
-  → Weak Entity
-  → Relationship
-  → Attribute
-  → Multi-Valued Attribute
-  → Composite Attribute
-  → Key Attribute
-  → Partial Key

CONSTRAINTS:

- (i) Customer — Order : Total on Order
- (ii) Order — OrderItem : Total on OrderItem
- (iii) Seller — Product : Total on Product
- (iv) Product — Category : Total on Category
- (v) Order — Payment : Total on Payment
- (vi) Order — Delivery : Total on Delivery
